**CONNECT YOUR HOME TO
SOLAR TODAY AND SAVE!**

TAKE ADVANTAGE OF GOVERNMENT SOLAR & BATTERY INCENTIVES

**We'll help you claim every dollar
you're entitled to.**

Solar is supported by federal STCs, the Cheaper Home Batteries Program takes around 30% off eligible storage, and heat pumps attract their own incentives.

Rebate levels change and conditions apply. Ask for the latest figures with your free quote.

**Ask us how solar and
battery solutions can help
reduce your energy costs**

OUR SERVICES

LEVEL 2 SERVICE WORKS

We can do the work most electricians can't.

Authorised for the network connection between the grid and your property: service mains/consumer mains upgrades, new service connections, metering, three-phase upgrades and private poles all done by our own team.

SOLAR SYSTEMS

Generate your own power and watch your bills drop.

Complete, fully compliant solar PV systems tailored to how you use energy from budget packages to premium setups, including any switchboard or mains work, handled by the same crew.

BATTERY STORAGE

Store your solar energy and use it when it matters.

Store daytime power for use at night to cut your grid reliance and beat rising prices. We install new batteries or retrofit storage to existing solar and with big rebates now available, the timing's ideal.

EV CHARGERS

Charge at home, ready every morning.

Fast, safe home and workplace EV chargers, fully integrated with your switchboard and solar. We'll size the right charger and complete any board or mains upgrade it needs.

HEAT PUMP HOT WATER

Hot water for a fraction of the running cost.

Heat pump systems use up to 75% less energy than standard electric hot water. We manage the full install and changeover, and help you access available rebates.
